PHARMACY AUTOMATION

ROBOWALL

RoboWall is a robot for storing completed prescriptions and permitting their automated and controlled collection by patients. RoboWall can be built in the outside wall of a pharmacy so that patients can collect their prescriptions 24 hours per day, 7 days per week from the robot.

Benefits

RoboWall gives you a competitive advantage because your patients will be able to use the 24/7 pick-up service.

RoboWall makes your process more efficient because the pharmacy counters will be relieved of pressure.
A large portion of prescription collection, normally 60% to 80% of all prescriptions, can be automated and controlled dispensed by the RoboWall.

How does it work?

RoboWall is filled with completed prescriptions.

The patient receives an email and / or text message that the prescription is ready to be taken from the robot with the related pin code. If the patient enters the right birth date and pin code the robot will automatically dispense the right prescription.

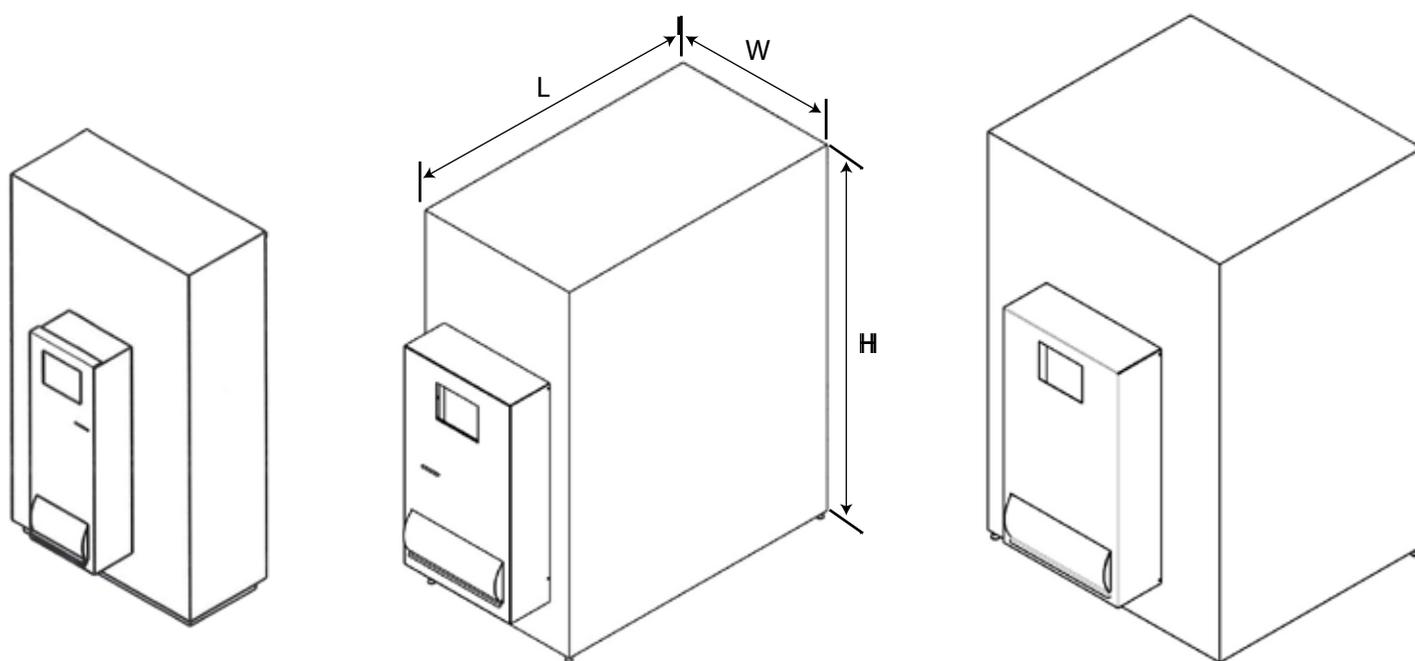

- Delivers automatically and controlled the right prescription to the right patient.

- Functions independently or connected to the pharmacy software.

- Available in a wide range of models and sizes from large to small and offers a suitable solution for every pharmacy.

- Able to handle large to small prescriptions packed in plastic bags, paper bags or other packaging.

- Compact with a high storage capacity per m2.

- Robust, weather proof and vandal resistant patient side.

PHARMACY AUTOMATION

Application

RoboWall can be built in the outside wall of a
pharmacy or can be placed free standing in the
waiting area. Also RoboWall can be placed in a
public space or outside.
Applications at community pharmacies, hospital
pharmacies, healthcare centres, general
practitioners, malls, train and metro stations,
supermarkets and other tactical places.
